Portfolio: my-portfolio-weld-zeta-76.vercel.app | Dhaka, Bangladesh (open to remote)

Summary

AI automation engineer and full-stack developer building AI agents, n8n workflows and API integrations that are safe on real business data: the LLM interprets, deterministic logic decides, and every step is logged, error-handled and tested. Builds daily with Claude and Claude Code; ships with Docker and PostgreSQL; working knowledge of Excel and basic accounting.

Skills

AI & Automation: n8n, Claude, Claude Code, Gemini API, Ollama, AI agents, RAG, prompt engineering, LLM guardrails
APIs & Integrations: REST APIs, webhooks, Meta Graph API, WhatsApp, Google Calendar, Telegram Bot API, Stripe
Data & Backend: PostgreSQL (Neon), SQL, Redis, Prisma, Node.js, Express.js, Excel, Google Sheets
DevOps & Tools: Docker, Docker Compose, Git, GitHub Actions, Vercel, Cloudflare Tunnel, Postman, PowerShell
Languages: TypeScript, JavaScript, Python, SQL, C++ | **Business:** basic accounting, process mapping

Projects

SalesFixr: AI Booking Receptionist for Clinics *2026 – Present*
n8n, Gemini, PostgreSQL (Neon), Docker, Meta Graph API, Google Calendar, Telegram GitHub

- Architected an AI receptionist that books appointments from Facebook/Instagram messages: Gemini extracts intent, while identity, consent, availability and booking are decided by deterministic n8n logic.
- Built an inbound gateway and safety gate (payload normalization, DB-driven owner/patient role resolution, STOP/START opt-out, human takeover, rate limits) that runs before any LLM call and writes every decision to a Postgres audit log.
- Designed a multi-tenant PostgreSQL schema (15 tables, versioned migrations) with an EXCLUDE constraint that blocks double-booking and idempotent webhook processing; routes 14 intents with no silent fall-through.
- Containerized n8n with Docker Compose, added a provider-agnostic LLM gateway (Gemini or local Ollama), and wrote PowerShell acceptance tests for each milestone.

AI Front Desk: WhatsApp Automation Kit for Local Businesses *2026*
n8n, PostgreSQL, Docker, Cloudflare Tunnel, LLM prompts GitHub

- Designed 9 importable n8n workflows (router, consent gate, AI reply, booking, escalation, central error handler) and SQL reporting views for KPIs, response time and lead attribution.
- Packaged it as sellable modules (booking agent, 60-second lead response) with versioned prompts, prompt test cases and a per-client onboarding runbook.

E-Doctor: Multi-Role Healthcare Platform with AI Assistant *2026*
Next.js, TypeScript, Express.js, PostgreSQL, Prisma, Stripe, Redis, RAG Backend | Live

- Integrated Stripe payment webhooks and automated appointment cron jobs across Patient, Doctor and Admin roles.
- Kept the RAG medical assistant's retrieval under 200 ms with Redis caching.

ShasthoAI: Bone-Fracture Detection (Final Year Project) *2026*
YOLOv8, Python FastAPI, React.js, Express.js, MongoDB Atlas GitHub | Live

- Fine-tuned YOLOv8 on 20,000+ X-rays (mAP 0.64 → 0.75) and served it as a FastAPI microservice inside a full-stack diagnostic web app.

Experience

Undergraduate Teaching Assistant (UGA) and Researcher *Dec 2024 – Jun 2025*
Network and IoT Lab, United International University Dhaka, Bangladesh

- Built departmental IoT projects, documented them in structured GitHub repositories, and helped students troubleshoot hardware-software integrations.

Web Development Trainee *Oct 2025 – May 2026*
Programming Hero (Level 2) Dhaka, Bangladesh

- Built full-stack MERN and PERN applications following professional workflows and code review standards.

Education & Awards

B.Sc. in Computer Science & Engineering (CSE) – CGPA 3.91 / 4.00 *Nov 2021 – Mar 2026*
United International University Dhaka, Bangladesh

- Merit scholarships: 100% tuition waiver in most trimesters, 50% in the rest. Champion, Electronics Lab (IoT automated shuttle); 1st Runner-up, Microprocessors Lab (AI/IoT smart wheelchair).
