Portfolio: my-portfolio-weld-zeta-76.vercel.app | Dhaka, Bangladesh

Summary

Software engineer (B.Sc. CSE, CGPA 3.91) building full-stack web apps, AI automations and hardware prototypes with Next.js, TypeScript, PostgreSQL, n8n, LLM agents, YOLOv8 and Raspberry Pi; uses Claude Code and Docker daily.

Education

B.Sc. in Computer Science & Engineering (CSE) – CGPA 3.91 / 4.00 *Nov 2021 – Mar 2026*
United International University Dhaka, Bangladesh

HSC (Science) – GPA 4.83 / 5.00 | **SSC (Science)** – GPA 4.89 / 5.00 *2018 – 2020*
Amirjan College (2020) / Yousufgonj School and College (2018) Dhaka, Bangladesh

Experience

Undergraduate Teaching Assistant (UGA) and Researcher *Dec 2024 – Jun 2025*
Network and IoT Lab, United International University Dhaka, Bangladesh | GitHub

- Built departmental IoT hardware projects, ran lab sessions, and guided students through networking/IoT projects and hardware-software troubleshooting.

Web Development Trainee *Oct 2025 – May 2026*
Programming Hero (Level 2) Dhaka, Bangladesh

- Built full-stack MERN and PERN applications following professional workflows and industry coding standards.

Projects

E-Doctor: A Multi-Role Healthcare System *2026*
Next.js, TypeScript, Express.js, PostgreSQL, Prisma, Stripe, Better-Auth, Redis, RAG Backend | Frontend | Live

- Architected a multi-role backend (Patients, Doctors, Admins) with TypeScript, Express.js, Prisma ORM and PostgreSQL.
- Kept RAG assistant retrieval under 200 ms with Redis; added Better-Auth, appointment cron jobs and Stripe webhooks.

SalesFixr: AI Booking Receptionist (n8n Automation) *2026 – Present*
n8n, Gemini, PostgreSQL (Neon), Docker, Meta Graph API, Google Calendar, Telegram GitHub

- Building an AI receptionist that books clinic appointments from Facebook/Instagram; the LLM reads intent, code decides.
- Added a safety gate (opt-out, human takeover), Postgres audit log and DB-level double-booking protection; runs in Docker.

ShasthoAI: University Final Year Project *2026*
React.js, Express.js, MongoDB Atlas, YOLOv8, Python FastAPI GitHub | Model | Live

- Trained a YOLOv8 fracture-detection model on 20,000+ GRAZPEDWRI-DX images, improving mAP from 0.64 to 0.75.
- Served the model as a FastAPI microservice on Render, integrated into a React/Express/MongoDB diagnostic web app.

PhysioSmart: Automated Wheelchair & Health Monitoring *2024*
Python, Raspberry Pi, OCR.space API, gTTS, IoT, Hardware Integration GitHub

- Built a Raspberry Pi system that reads prescriptions via OCR, matches medicines from camera scans and gives voice alerts.
- Integrated camera streaming, sensor-based health monitoring and external API calls on embedded hardware.

ParkSim & Zombie-Kill: Mobile Games *2026 – Present*
Godot 4, GDScript, 3D physics, Android export

- ParkSim: Android simulator that tests whether a real car fits a garage from entered dimensions, with realistic steering.
- Zombie-Kill: 3D lane-shooter for mobile. Both games are being prepared for Google Play release.

Skills

Languages: TypeScript, JavaScript, Python, C++, SQL, Java, GDScript
Web & Backend: Next.js, React, Node.js, Express.js, Prisma, PostgreSQL, Redis, MongoDB, REST APIs, Tailwind CSS
AI & Automation: n8n, Claude Code, Gemini API, RAG, LLM agents, YOLOv8, FastAPI, prompt engineering
DevOps & Tools: Docker, Git, GitHub Actions, Vercel, Render, Postman, Linux/WSL
Hardware & IoT: Raspberry Pi, microcontrollers, sensors, camera modules, networking fundamentals

Awards & Achievements

- Merit scholarships: 100% tuition waiver in most trimesters, 50% in the rest.
- Champion, Electronics Lab (IoT automated shuttle); 1st Runner-up, Microprocessors Lab (AI + IoT smart wheelchair).
